Professional Summary

SDET with product-company experience across API, backend, and frontend testing. Experienced in AI-assisted QA workflows for test design, large-scale regression execution, cross-layer verification, and evidence-based defect investigation. Skilled in SQL validation, test-script debugging, and creating reusable AI skills to improve consistency across testing workflows.

Professional Experience

SDET | Mysa Dec 2025 – Present

- Design and refine **3,000+ test cases** with AI-assisted workflows, covering API behavior, business rules, negative scenarios, and complex backend workflows.
- Orchestrate regression cycles involving **thousands of test executions**, reviewing evidence across APIs, databases, asynchronous workflows, and application logs.
- Debug and improve reusable test scripts and verification checks to support repeatable regression execution and broader test coverage.
- Investigate **50+ defects** by tracing failures across backend components and preparing evidence-backed findings for triage.
- Create **3–4 reusable AI skills** to preserve testing knowledge, standardize procedures, and support continuity across sessions.
- Review AI-generated findings, verify critical results, and make final QA decisions for workflows involving document processing, eligibility checks, and multi-level approvals.

SDET Intern | Mysa Aug 2025 – Dec 2025

- Performed manual API, backend, and frontend testing, covering functional behavior, business rules, negative scenarios, and edge cases.
- Designed test scenarios, investigated defects, verified fixes, and supported regression and release testing.

Summer Trainee – Dispensary Management System | ONGC May 2024 – Jun 2024

- Developed a patient-record management desktop application using Java, JDBC, MySQL, and Java Swing; integrated **8+ GUI screens**.
- Optimized SQL queries to improve data handling and consistency.

Selected Projects

Email Spam Detection | Python, scikit-learn, Pandas
Built a spam classifier reporting approximately **96% accuracy** on 5,000+ labeled emails; compared Naive Bayes and Logistic Regression and reported a 10% precision improvement through feature tuning.

Cognitive Situational Analysis and Predictive System | Python, CNN, SVM, Random Forest, EEG
Classified emotional states from EEG signals with a CNN model reporting **91% accuracy**; analyzed 10,000+ samples and compared multiple machine-learning models.

Web Quiz App | HTML, CSS, JavaScript
Built a responsive quiz app with dynamic questions, answer validation, live score tracking, and a results summary.

Technical Skills

Testing: API, backend and frontend testing; regression testing; functional testing; test design; business-rule and negative-scenario testing; defect investigation; root-cause analysis
AI-Assisted QA: AI-assisted test generation and execution; result verification; evidence analysis; reusable AI skills; workflow optimization
Tools: Apidog, Testmo, SQL, MySQL, Git, AWS Step Functions, Amazon S3, Coralogix
Programming & Foundations: Java, Python, JavaScript, C; OOP, data structures and algorithms, DBMS, operating systems, machine learning

Education

B.Tech, Computer Science Engineering | NIST Institute of Science and Technology, Berhampur | 2021–2025 | CGPA: 8.31
Class XII, CBSE | Pranavananda Vidya Mandir, Agartala | 2019–2020 | 84.5%
Class X, CBSE | Pranavananda Vidya Mandir, Agartala | 2017–2018 | 85.8%

Certifications & Leadership

Problem Solving and Competitive Coding (Jun 2024) • DBMS, NPTEL (Mar 2024) • Python for Data Science, NPTEL (Jul–Aug 2023) • Advanced C Programming and Data Structures (Mar 2023)
Coordinator, NIST Counseling Service | 2022–2025 – Guided first-year students and helped organize student-support events.
